### Speaker's desk

The design of **PO1** connects classical elegance and modern functionality. This representative speaker's desk is liked to be seen in the centre of any event. **PO1** pleases by the use of high-quality materials and the precision of its finish. This design doesn't just cover the complex requirements of a speaker's desk; it convinces as a very flexible and especially cost effective piece of furniture.

Büro Exner Interior & Produkt Design - Österreichisches Patentamt Nr. 47/24 Foto Jonathan Atkinson

Example for the colouring of the exchangeable front plate (from the left to the right): RAL 3012, RAL 1015, RAL 1034, RAL 6019, RAL 7044, RAL 5007, RAL 4009, RAL 6034, RAL 3000, RAL 8000, RAL 7010 and RAL 6021.

### Manuscript-board

The detachable front plate allows the possibility of individual coloration and lettering to adapt the appearance of p01 to the event and to the demands of any situation. Diverse front plates in different designs can be used to one and the same base-corps.

### Manuskriptablage

Because of the adjustable height (85-100 cm) of the manuscript-board it is flexible and adaptable. The total width of 42 cm offers enough area to place a drinking glass; manuscripts and presentation material like e.g. a notebook.

### Capability to be disassembled

Just a few manual movements are necessary to fold in the base plate and to take off the manuscript-board. Disassembled p01 measures a depth of just 11 cm and in this way is easily stored away and very comfortable to transport in any car.

### Microphone

p01 is conceived for mounting a microphone with swan-neck of AKG. The microphone capsule, especially developed for speaker's desks, guarantees the most professional sound quality and can be connected to any audio system by XLR plugs. The swan neck is screwed on the topside of the frame on a specially prepared mounting point.

The complete set, consisting of holding device, swan neck and microphone capsule will be delivered prepared to be mounted, if required.

### Lighting of the manuscript-board

The manuscript illumination guarantees that a manuscript stays perfectly visible, even in dimmed room situations. A miniwatt lamp is run either with a 9 V battery or a 230 V mains supply.

Therefore the manuscript lighting is also working, if there exists no possibility of a mains connection and guarantees the function of the speaker's desk at nearly any location.

### Coloration of the front plate

The standard finish of the removable front plate is graphite grey. If required, any colour of the RAL colour range can be requested for a small surcharge. In this way you get a possibility of a big influence on the design of p01 and can be adjusted to suit the appearance of your company or event.

### Logo on the front plate

On request the front plate can be created with additional text or graphics (e.g. the company logo) and therefore be adapted to any demands.

The number of colours used and the complexity of graphics determine the final price.

### Posting

p01 will be delivered part assembled in a compact package unit. A clear description will explain the few steps, which are necessary to erect p01.
